

Template Week 5 – Operating Systems

Student number: 582567

Assignment 5.1: Unix-like

- a) Find out what the difference is between UNIX and unix-like operating systems?

UNIX is gecertificeerd en heeft de trademark van The Open Group. Unix-like operating systems, die lijken erop (hebben zowat dezelfde commands), maar zijn niet officieel geautoriseerd.

- b) Study the image above named UNIX timeline. Find out who Ken Thompson, Dennis Ritchie, Bill Joy, Richard Stallman, and Linus Torvalds are and what they have contributed to the development of UNIX or unix-like systems and to IT in general. **TIP!** English-language sources often contain more detailed information about these individuals.

Ken Thompson en Dennis Ritchie: zijn de originele makers van Research Unix in begin 1970. Ritchie heeft programmeertaal C uitgevonden, hiermee heeft hij Unix overdraagbaar kunnen maken, daardoor ook als we kijken naar de eerdere opdrachten, kunnen we zien dat C directe relatie heeft met de CPU.

Bill Joy: is de belangrijkste ontwikkelaar in BSD (Berkeley Software Distribution). Hij heeft belangrijke aanvullingen toegevoegd binnen de groei van Unix. Zo heeft hij ervoor gezorgd dat IP networking deels uitmaakte van de inventie van de bekende Ken Thompson en Dennis Ritchie.

Richard Stallman: is de persoon die GNU heeft ontwikkeld, hij wilde ervoor zorgen dat alles open-source werd, hierdoor staat het iedere gebruiker toe om de software te hergebruiken en te wijzigen. Later op 4 oktober 1985, heeft hij de Free Software Foundation (FSF) opgericht. Die voor zijn doelen opkomt.

Linus Torvalds: is ten slotte de persoon die Linux heeft opgericht. Hij heeft de kernel in 1991 opgericht om het GNU-project aan te vullen. Deze ontbrak namelijk alleen een kernel.

- c) What is the philosophy of the GNU movement?

Zoals eerder benoemd strijdt de GNU voor vrijheid binnen het gebied van software, het geeft een individu het recht om de software te wijzigen en te delen naar anderen.

- d) Does Ubuntu as a Linux operating system conform to the philosophy of the GNU movement? Please explain your answer.

Ze hebben over het algemeen wel free software, maar voor mijn gevoel staat er op het internet dat GNU vrij strict was in hun vrijheidskeuze, volgens mij is het zo dat Ubuntu ook closed-blob drivers verkoopt, zoals NVIDIA drivers bijvoorbeeld. Dus niet 100%.

- e) Find out what is the Windows Subsystem for Linux?

Windows Subsystem for Linux laat een gebruiker van windows zijn eigen Linuxomgeving ervaren.

- f) Find out, which operating system family belongs to Android, iOS and ChromeOS?

Android & ChromeOS: stammen af van Unix, het is een aangepaste versie van Linux, alleen gebruikt Android haar eigen library, en ChromeOS is volledig gebaseerd op Google Chrome.

IOS: daarentegen, staat volgens mij ook op de tijdlijn, is begonnen bij de BSD, als Darwin's eigen OS.

Assignment 5.2: Supercomputers and gameconsoles

- a) Research on this site what supercomputers are used for and write a short summary of it:
<https://www.computerhistory.org/timeline/search/?q=Supercomputer>

Supercomputers worden over het algemeen gebruikt om zo snel mogelijk data op te nemen en the processen. De eerste Linux operating supercomputer werd ontwikkeld door David A. Bader, toen hij nog op de universiteit zat. Met dit prototyp heeft hij de development van RoadRunnen kunnen bevorderen door de leiding te nemen binnen de groep. RoadRunner werd later in de productie gebruikt in April 1999.

- b) IBM is a company that has already built a number of supercomputers. One of them is IBM's Roadrunner. The CPU developed for this supercomputer was further developed at a later stage as the CPU for the PlayStation 3 console. Find out what a **PlayStation 3 cluster** is and what it was used for?

PlayStation3 cluster: Een goed presterend computing systeem, gebouwd voor gaming doeleinden. Ik heb gelezen dat de Air Force gebruik heeft gemaakt van zo'n PlayStation3 cluster.

- c) You can build a supercomputer by putting a few computers together in a cluster. Here's what Oracle did with a collection of Raspberry Pi's, for example:
<https://blogs.oracle.com/developers/post/building-the-worlds-largest-raspberry-pi-cluster>
What specific operating system is running on this cluster?

Ik denk dat ze hun eigen Linux aangepaste operating system gebruiken. Ook voornamelijk om hun networking te verbeteren.

- d) Does Oracle's Raspberry Pi supercomputer appear in the list of the 500 fastest supercomputers in the world? Make a logical decision for this, without going through the entire list.
<https://www.top500.org/lists/top500/list/2023/06/>

De raspberry was niet bedoeld voor commercieel gebruik, dus het heeft niet de hoeveelheid investeringen die de nieuwere, verbeterde clusters tegenwoordig hebben. Dus hoogstwaarschijnlijk niet.

- e) What CPU architecture is used for the PlayStation 5 and Xbox Series X?

8 AMD Zen 2 cores

What operating systems run on these consoles?

PlayStation 5 (Unix-derivative) Xbox Series X (Hybrid + Hyper-V (Windows derivative))

What conclusion can you draw from the answer to the previous question?

Het is beter zo, want veel commerciële bedrijven willen ook games maken voor op de computer, dus de hardwaresystemen zijn zowat hetzelfde, waardoor ze veel minder aanpassingen hoeven te maken om het over te dragen.

Assignment 5.3: Working with Windows

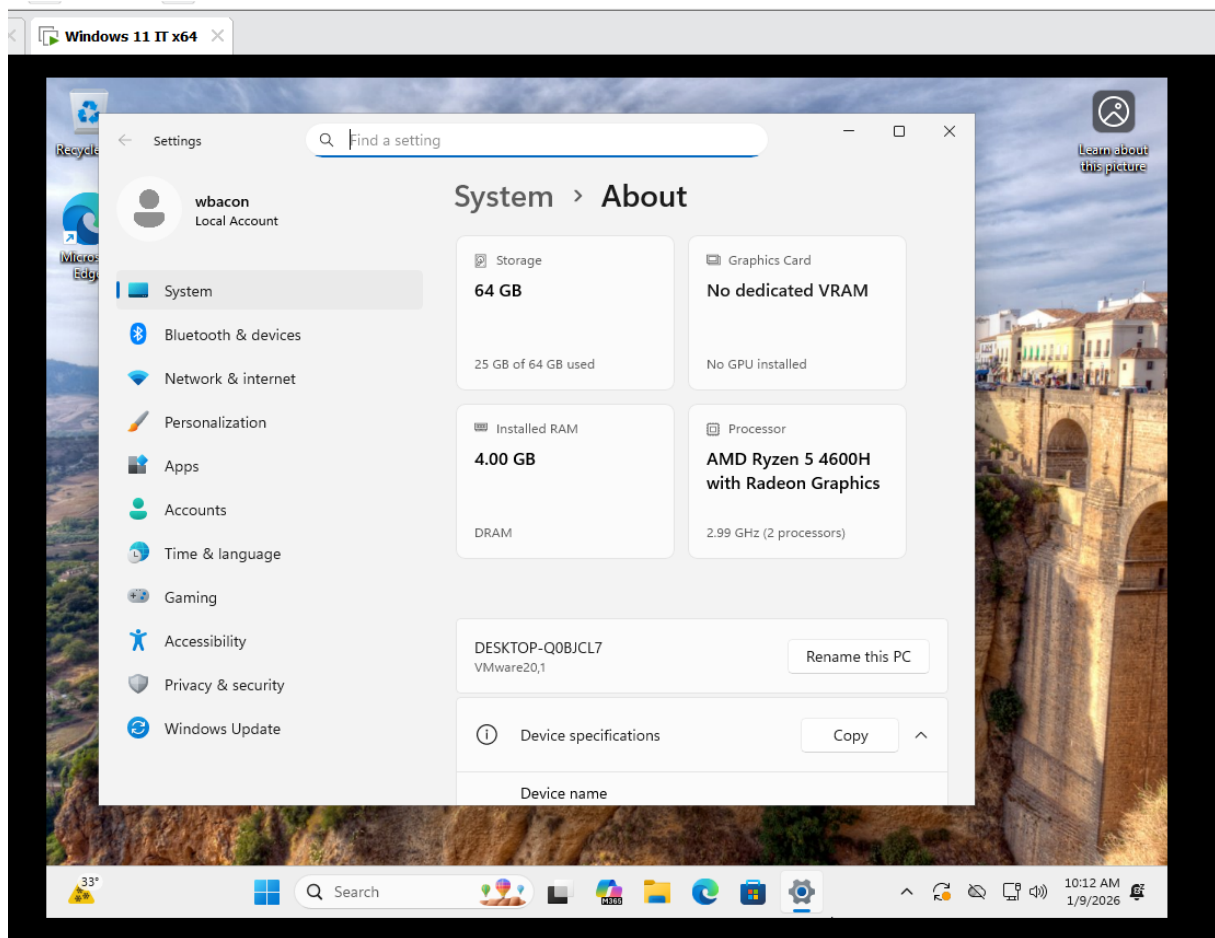

Take relevant screenshots of the assignments below

- a) Practice for about 10 minutes with the **W** keyboard shortcuts combinations, skip the general shortcuts in this exercise. Take a look at which screens are opened.

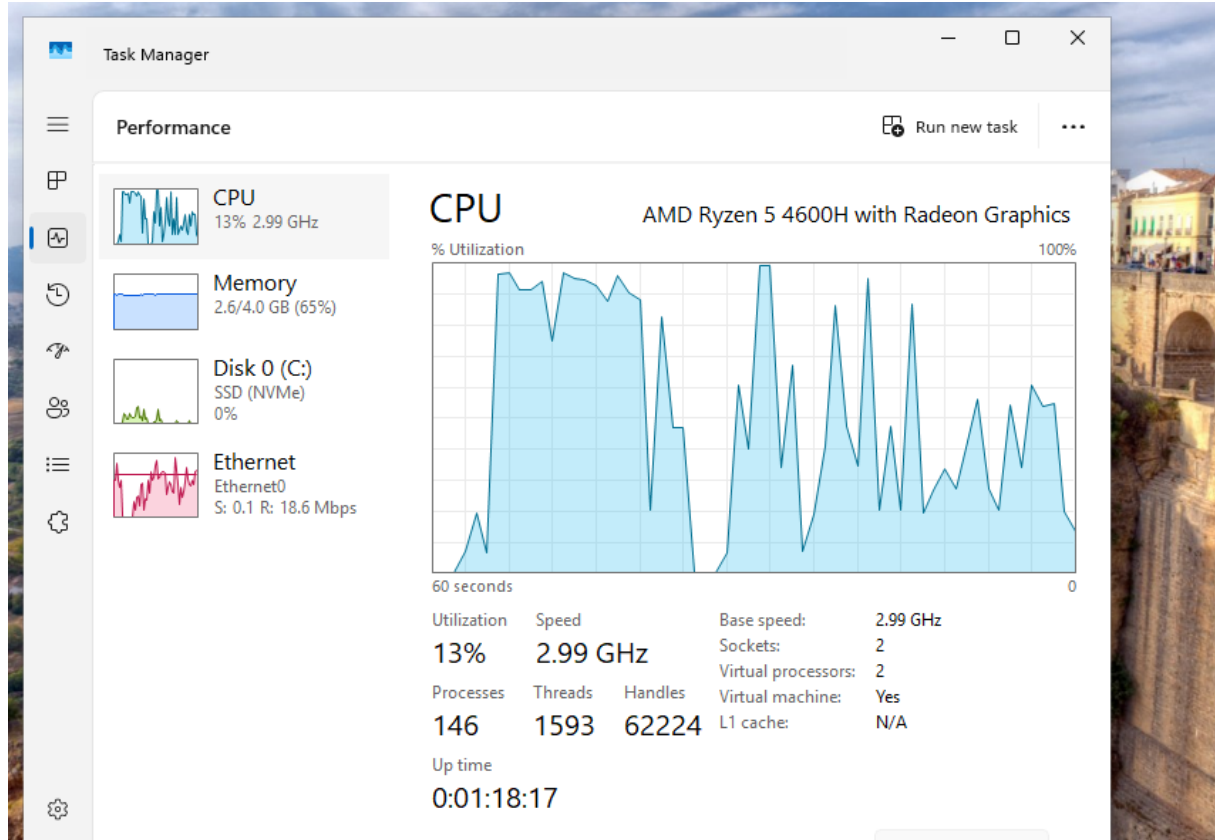

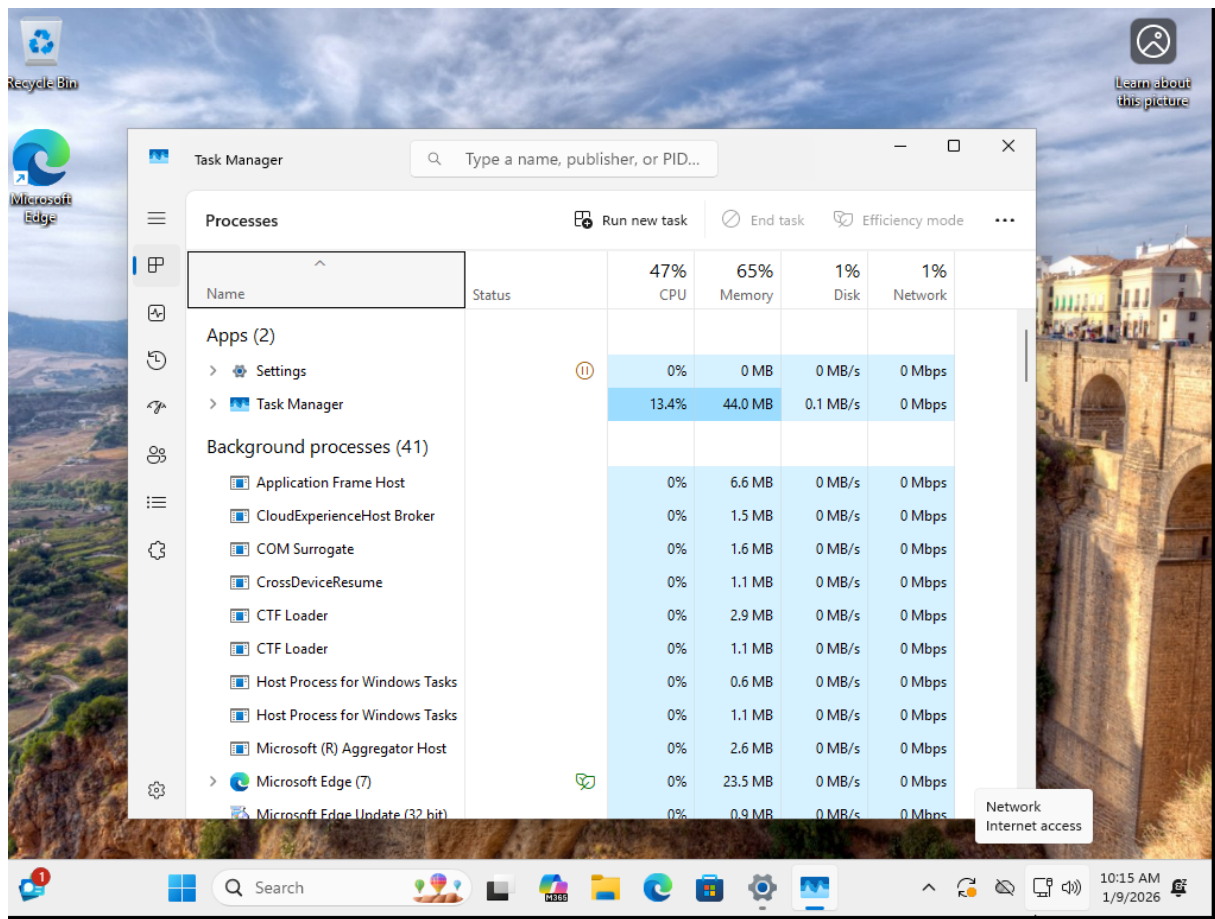

- b) The file explorer can be opened with **W + E**, Which key combination could you also use?

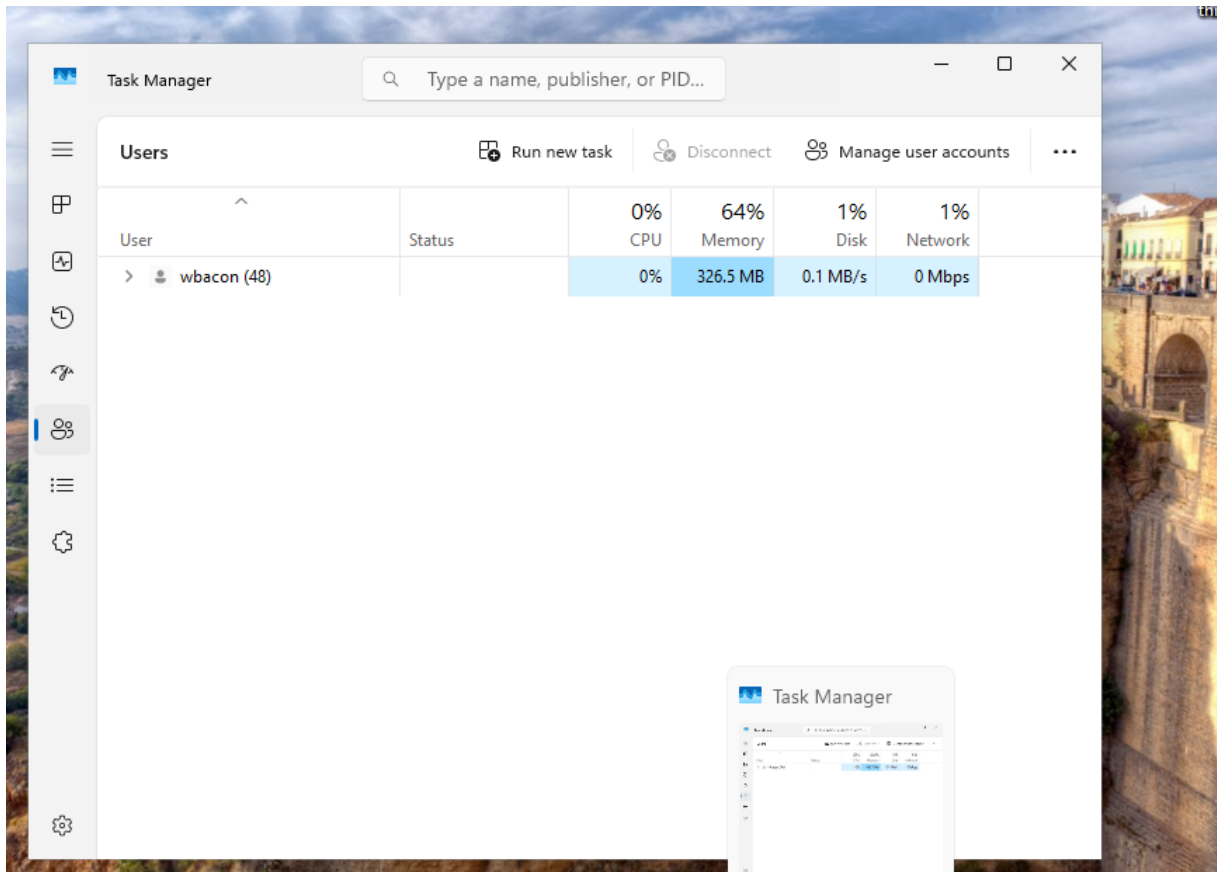

Er is geen andere mogelijkheid om hem direct te openen, wel kan je **W + S, en dan de file explorer aanklikken.**

- c) Open the system properties with a **W** key combination, take a screenshot of the open screen. Paste this screenshot into this template.

- d) Open task manager with a key combination. Take screenshots of the tabs: processes (shows active processes), performance, and users. Place these three screenshots in this template.

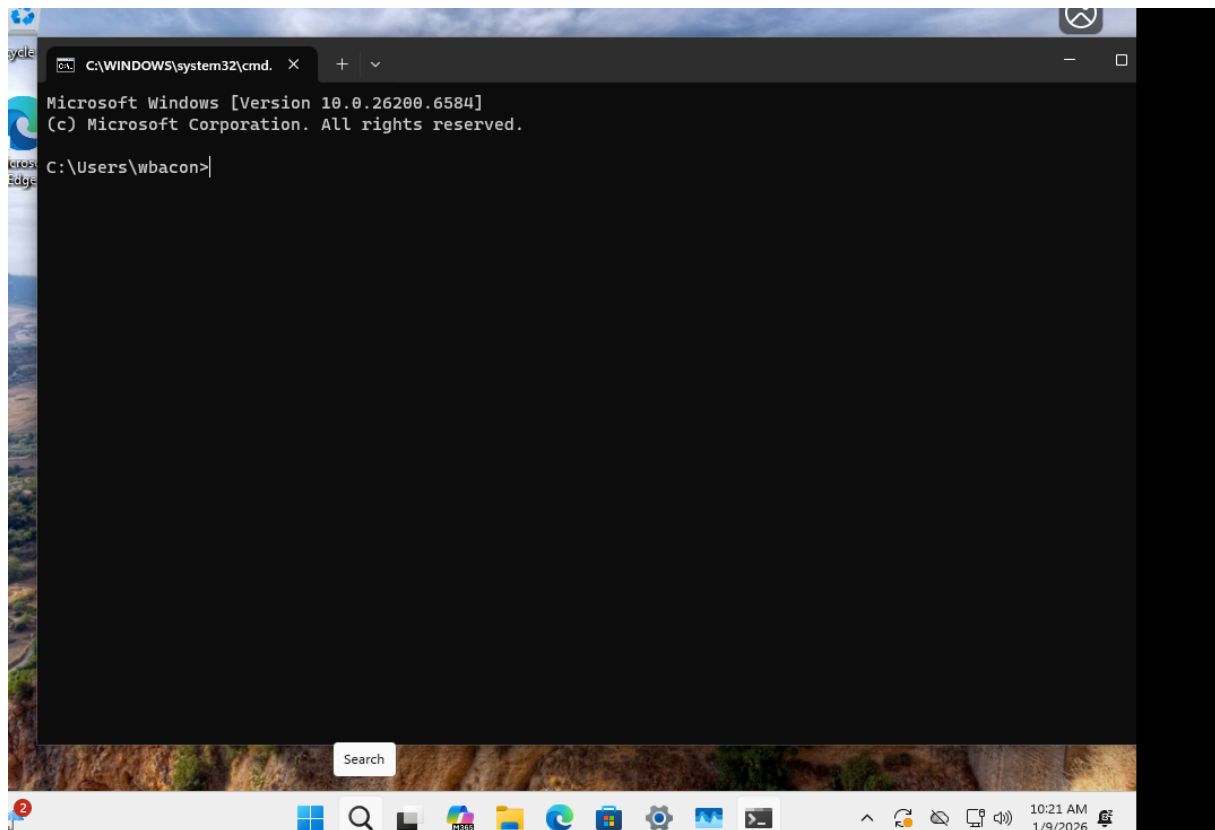

- e) If you're giving a PowerPoint presentation and you connect your laptop to a projector, Windows can use the projector as a second screen. For example, you may have Outlook open on your first screen that you don't show over the projector, while the PowerPoint presentation is displayed on the projector, or the second screen. Which key combination should you use for this?

W + P

- f) If you leave the classroom for a while and you leave your laptop behind, it is wise to lock the screen. Your Apps will continue to run in the background. So, for example, if you're waiting for a download that takes a while, lock the screen and get a cup of coffee. Which key combination do you use for this?

W + L

- g) Open the Run screen with a key combination. On this screen, type CMD and press <enter>. Take a screenshot of this result and paste it into this template.

Working in the File Explorer

Relevant screenshots **copy** command:

```
C:\Saxion>copy Wave.png "HBOICT\YEAR1\QUARTILE1\Introductie Programmeren"
1 file(s) copied.
